

INFECTION CONTROL

Dentech realizes the importance of proper disinfecting techniques!

*With the increasing worry of cross-contamination
in the dental field, we want you to feel confident in our infection
control standards.*

*When a case arrives in our lab, a gloved technician sprays or
soaks all models and appliances with a disinfectant solution before
work on the case begins. Also, upon delivery of your cases,
appliances will be returned in a sealed pouch with disinfectant
solution for your patient's protection.*

*We also ask that, before sending us any case, the appliance or
impression be rinsed and disinfected as well.*

Thank you for your help!
